EXTOVER®
INFORMATION SHEET

CESAT

WHAT IS EXTOVER?

EXTOVER is a special extinguishing granulate made from expanded glass. It is designed for lithium-ion battery fires, metal fires, and preventive fire protection.

MADE IN CANADA

KEY FACTS

- Made from 100% recycled glass
- Purely mineral and non-combustible
- Environmentally and health friendly
- Recyclable if uncontaminated

FIRE PROTECTION

ABSORBS HEAT AT APPROX. 700°C

ENVIRONMENTALLY FRIENDLY

RECYCLED GLASS

HOW EXTOVER WORKS

1. Covers the fire load and helps displace oxygen
2. Absorbs heat as the glass softens at approximately 700°C
3. Forms a sealing layer as it cools, helping reduce re-ignition
4. Binds liquids, gases, and vapours on the granule surface

- Small lithium-ion battery incidents
- Damaged battery handling after the fire is out
- Supports for temporary storage and transport of damaged batteries
- No extinguishing water damage from the agent itself

- Made from recycled glass instead of newly mined material
- Supports a more sustainable, circular-use material approach
- Mineral-based and easy to handle
- Can be reused if clean and uncontaminated

CESAT RECOMMENDED STARTER INVENTORY

CESAT PRICE: $65 CAD PER BAG
PLUS SHIPPING AND TAX FOR NON-MEMBERS
